RE: Eagle Roofing Systems

To Whom It May Concern:

I am pleased to recommend Eagle Roofing Systems to your organization. The staff and crew at Eagle Roofing were responsive to our needs in repairing/replacing the roof on our high school. The work performed was within the projected budget and completed on time.

Further, after the tornado of May 10, 2010, we determined that the roof on the elementary school core facility was damaged. We contacted Eagle Roofing on an emergency basis and they responded immediately completing the repair work in an exemplary manner.

Our experience with Eagle Roofing and the staff and crew had been a positive one from beginning to end.

Sincerely,

Barry Damrill  
Superintendent

#### Note From Eagle Roofing:

In July of 2009, we applied our Chopped Fiberglass Emulsion Roof System to the Little Axe School roof. You will see the process in the video within this website.

On May 10, 2010 a tornado with 200mph winds did a great deal of damage in the area surrounding the school, but the roof had very little damage from flying debris. The roof remained intact, and only needed a few repairs.

The school district was so happy with the results, we were hired to re-roof the Elementary School in August of 2010.
